Business Intelligence Competency Centers

Image

What is a BICC?

A Business Intelligence Competence Center (BICC) is a **cross-functional organizational team** that has defined **tasks, responsibilities, roles and skills** for supporting and promoting the effective use of Business Intelligence across an organization

Note that Gartner says that “Competency Centers” have a bad reputation, and now recommends “Business Analytics Team”...

Basic Goal: Make BI More Strategic and Cost-Effective

Diagram

BICCs Bring Big Benefits

Every winner of a BI Best Practice Award has a BICC

- (but beware of correlation and causation)

Organizations With A BICC see:

- Increased usage of Business Intelligence (74%)

- Increased business user satisfaction (48%)

- Better understanding of the value of BI (45%)

- Increased decision-making speed (45%)

- Decreased staff costs (26%)

- Decreased software costs (24%)

The Main Functions and Responsibilities of a BICC

But BICCs Are Not Driving BI

Figure

The Majority of Data Users Need Isn't In The System

"We found, on average, that 45% of the data business people use resides outside of the enterprise BI environments.

An astonishingly miniscule 2% of business decision-makers reported using solely enterprise BI applications.

This is undoubtedly connected to 76% of business respondents indicating they continue to resort to spreadsheets and other homegrown BI applications to analyze BI data. "

Basic Conflict

BI programs have struggled to clearly define roles and responsibilities between IT and business users in a self-service BI delivery model.

Few BI programs have been able to find a workable balance between business user empowerment and governance with self-service data discovery.
