2x Indian shoppers X 1.1x number of orders per year per shopper X 2x average order value

Page-text
Online Shopping defined in this presentation does not include travel, ticketing and food ordering – only physical goods commerce

Title
Executive summary

Page-text
Key findings

Page-text
Average order values climbing up rapidly

- Page-text
1. Last year there was a significant jump in average order value as there was a penetration of new categories like jewellery, home décor etc.
 2. Also, users are becoming more comfortable buying higher priced items online.

Page-text
Fashion category doubled last year

- Page-text
1. Last year was the rise of the fashion category – fashion e-commerce GMV doubled since 2012.
 2. Given the young demographic which is shopping for latest looks online and increasing choice online – we estimate that this category will see 400% growth in the next 3 years and rival electronics and mobile category in GMV.

Trends

Figure

Figure

Other-text

Page-text

Mobile shopping is seeing phenomenal growth

Page-text

1. Mobile shopping infrastructure is improving – smartphones, connectivity, mobile websites and apps

Page-text

2. People are becoming more comfortable in ordering higher priced items online

Page-text

Women influenced sales will grow 5x in next 3 years

Page-text

1. 35% of online GMV in 2016 will be influenced by women

Page-text

2. Key factor in this growth is increasing supply of women specific categories e.g. jewellery, lingerie, motherhood products

Executive Summary

Page-text

Trends: Rise of EMIs & Wallets

Page-text

- With increasing order values, we are seeing an uptick of EMI payments
- 3rd party wallets albeit a new phenomenon, have a strong value proposition and will be quick to become popular – similar to China

Figure

Page-text

Growth factors

Image

Page-text

More penetration in Tier-II and Tier-III towns

Page-text

1. Tier 2 cities growing much faster in eCommerce adoption than Tier 1

Page-text

2. Some states completely lagging in ecommerce, waiting for infrastructure to be put in place

Page-text

New shoppers will come from the 40M+ Gen-Y FB users

Page-text

1. Potentially 40M shoppers between ages of 19 – 24 years, will start spending money online

Page-text

2. These shoppers also have a propensity to spend more money than Gen-X shoppers

Obj-text

% of internet users who visit e-commerce sites = 60%

Figure

Obj-text

Conversion from visitors to buyers

Page-text

- India e-commerce market will start maturing and display characteristics similar to China – which traditionally has higher conversion rates (nearly 3.5%)

Page-text

- This is due to e-commerce being only choice for availability of goods in parts of the country and easy payment options like COD – which are not problems in western countries

Mobile

There is a traffic to revenue gap on mobile e-commerce in India

Caption

Mobile shopping grew 800% in 2013, we expect it to grow at a 150% CAGR till 2016

Page-text

Factors leading to major adoption of mobile as a channel:

Page-text

10% of the growth in Indian internet users was mobile only

- Showrooming – a growing habit

Page-text

Reasons why there is not a 1:1 conversion of traffic to mobile:

Page-text

Most e-retailers do not have mobile optimized sites

Page-text

Most transactions are for low ticket items

- Mobile marketing budgets are < 10% of overall digital marketing budgets, even though they have increased 100% Y-o-Y, even though overall ad spends have increased 20% Y-o-Y

Figure

Caption

Mobile revenue share is lagging mobile traffic share in India and China

Figure
